

Attendees (7):

Jacquelyn Co
Tiana Canja
Hana Kim
Nhan Pham
Dustin Lin
Sasha Kubichka
Christian Lee
Sanat Bhandarkar

Objective: (past tense)

Go over progress since the last meeting - run through what the project is looking like so far; i.e. notes, photo album, notes etc.

Agenda:

- Run through current functionality of the project
- Go over any current issues with backend
- Questions
- Feedback

Information Covered:

- What has been done on collections and what issues are being had on the backend?
 - Bullet itself is not saving to the correct formatting
 - Functionality still works, but displaying the collections on frontend isn't working properly yet
- Do you have tags to assign collections?
 - Currently one collection category per bullet
- Are you happy with what you have so far - this is looking like an MVP.
 - Tagging and encryption are still in process
- Look for simple encryption package for javascript
- Security is not a core feature - not being pushed as completely secure
- What ideas do you have for addressing storing the key?
 - *Us*: No <3
 - *Sanat*: Say you are encrypting the data, and hide the key in a nested collection - don't make it easily accessible. Don't prioritize encryption too much.
- Questions?
- Feedback - MVP is pretty much done
 - Be happy with where you are
 - Lots of progress since last week
 - Your focus for 1.5 weeks is **styling**
 - Focus on exploring how easy it is to use logging features
 - Do you plan on changing nested bullet implementation or is it going to stay like this? (the process of adding it in)
 - We were going to add another nested bullet

- Add in smaller icon next to bullet rather than long bar of choices
- Is there a scroll bar
 - Still being worked on / just merged
- Don't worry about sprinting
- Styling and testing to take care of now
- Is there any feature you want to include?
- *Customization* - are you planning to include a settings bar
 - One really unique theme rather than the picking of themes due to time constraints
- Does anyone want to re-evaluate that feature?
 - Rests heavily on people that are doing design and if they can take on the workload
- It seems there is potential to add customization of some sort - are there any other ideas for user customization?
 - Having the ability to change the colors - might be a little easier
 - Don't customize the layout, just different themes/colors
- For the final you need to make 2 videos and include them in the repo
 - Short video can be fun 3-4 min
 - Long video 8-16 min - introduce yourselves and include your contributions to the team
- Final is **synchronous** - attend to review videos
